Ehsan Barghamadi

Python / Django Backend Developer

ehsan0barghamadi@gmail.com 09302147871 Tehran, Iran

Projects

Event Planet — Event Management API

Django · Django REST Framework · PostgreSQL · Docker · JWT · OpenAPI

Developed an **API-first event management platform** using Django REST Framework, supporting separate workflows and permissions for organizers, participants, and staff.

- Designed and implemented a **state-machine-based event lifecycle**, enforcing valid transitions between states such as DRAFT, PUBLISHED, ONGOING, CLOSED, and FINISHED.
- Implemented a flexible **EAV (Entity-Attribute-Value) data model** for type-safe dynamic event attributes without requiring schema changes for new attribute types.
- Built a production-oriented API environment with **JWT authentication, API versioning, filtering/search, OpenAPI documentation, PostgreSQL, and Docker Compose**.

https://github.com/EhsanBarghamadi/Event-Planet

Digichera — Multi-Vendor E-Commerce Platform

Django · PostgreSQL · SQLite · Pillow · Bootstrap

Developed a **multi-vendor e-commerce marketplace** where sellers can manage their own stores and products while customers can purchase from multiple vendors through a unified shopping cart.

- Designed a **multi-vendor checkout workflow** that automatically splits a customer's cart into separate vendor-specific orders while validating product stock before order creation.
- Implemented **transaction-safe checkout** using Django transactions and PostgreSQL row-level locking (select_for_update) to prevent stock inconsistencies during concurrent purchases.
- Built **custom authentication and role-based access control** for customers, sellers, and staff, along with guest-cart support and automatic cart merging after authentication.

Experience

Independent Backend Developer 2026 – Present

Backend Developer (Python/Django)

- Developed backend applications with Python, Django, and Django REST Framework, focusing on API design, business logic, authentication, and database architecture.
- Worked with PostgreSQL, Docker, Git, and Linux; applied transactions, concurrency control, validation, state machines, and API versioning.

Summary

Backend Developer specializing in Python, Django, and Django REST Framework, with hands-on experience building REST APIs and transactional backend systems. Experienced with PostgreSQL, Docker, authentication, authorization, and database architecture.

Skills

Languages & Frameworks
Python, Django, Django REST Framework

Databases & Tools
PostgreSQL, SQL Server

DevOps & Architecture
Docker, Docker Compose, Git, Linux (Ubuntu), REST APIs

Testing & Libraries
Pytest, Pillow
